A CATALOGUE
OF
BRITISH COLEOPTERA

BY
G. R. CROTCH.

CAMBRIDGE.
1863.

I HAVE endeavoured to comprise in this Catalogue all the Coleoptera at present known to be natives of Great Britain; several species whose indigenous origin is doubtful will be found at the end, and concerning these, any information will be very acceptable to me. Many species of Buprestidæ, Cerambycidæ, &c., have clearly been accidentally introduced into this country, and are consequently omitted;—as are also those species registered by mistake, e.g. *Ptilium cæsum*, *Er.*; and certain species extant in the old collections, concerning whose capture nothing definite is known.

Those species which though originally introduced into this country, have now become naturalized, are indicated by having an asterisk (*) prefixed to their names.

G. R. CROTCH.
